Spotting Export – How to use

LIGHTROOM CLASSIC → PHOTOSHOP → INSTAGRAM CAROUSEL

One export, step by step

1. Finish your panorama in Lightroom Classic (crop 8x5, 12x5, 16x5 or 20x5).
2. Right-click → **Edit In → Edit in Adobe Photoshop**.
3. In Photoshop press your shortcut (e.g. **⌃⌘E** – Photoshop may show it as "Ctrl+⌘+E").
4. Fill in the input window and click **OK** – Tab = next field, Return = OK, Esc = cancel.
5. Wait for the **"Done"** notification. Photoshop closes, Lightroom exports the original, then Photoshop builds the carousel.

The input window

Field	Note
Registration	Required. Known registrations fill in airline and type automatically.
Airline / Aircraft type	Lists with previous entries. Sub-types are shortened (A340-600 → A340); missing folders are created.
Airport / Runway	Pre-filled from your spot (GPS). Empty runway = the spot's runway for the chosen direction.
Direction	right → right slice becomes the front, left → left slice.
Format	Detected from the image, can be changed.
Extra	Optional, appended to the folder name (e.g. ShortFinal).

The result

```
Export folder/B747/D-ABYN-Lufthansa-FRA-25L-ShortFinal/
  Date_Name_Registration-Front.jpg · -Panorama-16x5.jpg · -16x9.jpg (original)
  Carousel/01.jpg … – ready to upload in this order
```

Good to know

• **Change export folder:** "Change export folder …" in the input window – your choice is saved.
• **Spots:** with GPS data and spots in config.json, airport and runway fill in automatically.
• **After starting Lightroom** "Spotting Export ready" appears briefly – then you're set.
• **Stuck in Lightroom?** Restart Lightroom with ⌘Q. Fallback: Library → Plug-in Extras → Spotting Export – run now.
• **Log file:** ~/Library/Application Support/SpottingExport/spotting_export.log
